

UTILIZATION MANAGEMENT MEDICAL POLICY

POLICY: Oncology (Injectable) – Adcetris Utilization Management Medical Policy

- Adcetris® (brentuximab intravenous infusion – Seattle Genetics)

REVIEW DATE: 03/18/2026

OVERVIEW

Adcetris, a CD30-directed antibody and microtubule inhibitor conjugate, is indicated for the following uses:¹

- **Classical Hodgkin lymphoma:**
 - In adults with previously untreated Stage III or IV disease, in combination with doxorubicin, vinblastine, and dacarbazine.
 - In adults at high-risk of relapse or progression as post-autologous hematopoietic stem cell transplantation (HSCT) consolidation.
 - After failure of autologous HSCT or after failure of at least two prior multi-agent chemotherapy regimens in adults who are not autologous HSCT candidates.
 - In patients ≥ 2 years of age with previously untreated, high-risk disease in combination with doxorubicin, vincristine, etoposide, prednisone, and cyclophosphamide.
- **Large B-Cell Lymphoma**, including diffuse large B-cell lymphoma (DLBCL) not otherwise specified, DLBCL arising from indolent lymphoma, or high-grade B-cell lymphoma, in adults with relapsed or refractory disease, after two more lines of systemic therapy who are not eligible for autologous HSCT or chimeric antigen receptor (CAR) T-cell therapy, in combination with lenalidomide and a rituximab product.
- **Primary cutaneous anaplastic large cell lymphoma or CD30-expressing mycosis fungoides**, in adults who have received prior systemic therapy.
- **Systemic anaplastic large cell lymphoma or other CD30-expressing peripheral T-cell lymphomas**, including angioimmunoblastic T-cell lymphoma and peripheral T-cell lymphomas not otherwise specified, in previously untreated adults in combination with cyclophosphamide, doxorubicin, and prednisone.
- **Systemic anaplastic large cell lymphoma**, in adults who have failed at least one prior multi-agent chemotherapy regimen.

Dosing Information

A Phase II study assessed the efficacy of Adcetris in patients with relapsed/refractory B-cell CD30+ non-Hodgkin lymphoma.⁹ Patients received Adcetris 1.8 mg/kg intravenously every 3 weeks until disease progression, unacceptable adverse events, or study closure. The overall response rate in patients with diffuse large B-cell lymphoma was 44% (n = 21/48) and 26% (n = 5/19) in patients with other B-cell lymphomas.

Guidelines

Adcetris is addressed in National Comprehensive Cancer Network (NCCN) guidelines:

- **B-Cell Lymphomas:** NCCN guidelines for adults (version 3.2026 – March 12, 2026) recommend Adcetris as second-line or subsequent treatment for a variety of B-Cell lymphomas, such as + diffuse large B-cell lymphoma (DLBCL), high-grade B-cell lymphoma, human immunodeficiency virus (HIV)-related B-cell lymphoma, plasmablastic lymphoma, post-transplant lymphoproliferative disordersprimary mediastinal large B-cell lymphoma, and histological

transformation of indolent lymphomas to DLBCL.^{2,3} Pediatric Aggressive Mature B-Cell Lymphomas (version 2.2025 – April 28, 2025) recommend Adcetris in combination with Opdivo® (nivolumab intravenous infusion) for relapsed or refractory primary mediastinal large B-cell lymphoma (category 2A).^{2,4} Adcetris in combination with Opdivo or Keytruda (pembrolizumab intravenous infusion) can be used if partial response is achieved after therapy for relapsed or refractory disease (category 2A).

- **Hodgkin Lymphoma:** NCCN guidelines for adults (version 1.2026 – October 22, 2025) recommend Adcetris for the treatment of classical Hodgkin lymphoma in combination with chemotherapy, as primary treatment, as second-line or subsequent therapy for relapsed or refractory disease, as maintenance therapy following high-dose therapy and autologous stem cell rescue for relapsed or refractory disease, or as palliative therapy.^{2,5} Pediatric guidelines (version 2.2025 – June 9, 2025) recommend Adcetris for primary and additional treatment of high-risk disease; re-induction or subsequent therapy for relapsed or refractory disease in heavily pretreated patients or patients with reduced cardiac function in combination with bendamustine, Opdivo® (nivolumab intravenous infusion), and gemcitabine; and as maintenance therapy following high-dose therapy and autologous stem cell rescue.^{2,6}
- **T-Cell Lymphomas:** NCCN guidelines (version 2.2026 – February 13, 2026) recommend Adcetris as a first-line or subsequent treatment option for a variety of T-cell lymphomas, either as a single agent or in combination with cyclophosphamide, doxorubicin, and prednisone.^{2,7} Cutaneous lymphomas guidelines (version 2.2026 – February 13, 2026) recommend Adcetris for the systemic therapy of CD30+: mycosis fungoides/Sezary syndrome, primary cutaneous anaplastic large cell lymphoma, and lymphomatoid papulosis.^{2,8}

POLICY STATEMENT

Prior Authorization is recommended for medical benefit coverage of Adcetris. Approval is recommended for those who meet the **Criteria** and **Dosing** for the listed indications. Extended approvals are allowed if the patient continues to meet the Criteria and Dosing. Requests for doses outside of the established dosing documented in this policy will be considered on a case-by-case basis by a clinician (i.e., Medical Director or Pharmacist). All approvals are provided for the duration noted below. Because of the specialized skills required for evaluation and diagnosis of patients treated with Adcetris as well as the monitoring required for adverse events and long-term efficacy, approval requires Adcetris to be prescribed by or in consultation with a physician who specializes in the condition being treated.

Automation: None.

RECOMMENDED AUTHORIZATION CRITERIA

Coverage of Adcetris is recommended in those who meet one of the following criteria:

FDA-Approved Indications

-
1. **B-Cell Lymphoma.** Approve for 1 year if the patient meets BOTH of the following (A and B):
Note: Examples include diffuse large B-cell lymphoma, post-transplant lymphoproliferative disorders, HIV-related B-cell lymphoma, high-grade B-cell lymphoma, primary mediastinal large B-cell lymphoma, and histological transformation of indolent lymphomas to diffuse large B-cell lymphoma.
A) Patient has tried at least one prior therapy; AND
B) The medication is prescribed by or in consultation with an oncologist.
-

Dosing. Approve up to 1.8 mg/kg or a maximum of 180 mg administered by intravenous infusion no more frequently than once every 3 weeks.

2. Hodgkin Lymphoma. Approve for 1 year if the patient meets BOTH of the following (A and B):

- A) Patient has classical Hodgkin lymphoma; AND
- B) The medication is prescribed by or in consultation with an oncologist.

Dosing. Approve up to 1.8 mg/kg or a maximum of 180 mg administered by intravenous infusion no more frequently than once weekly.

3. T-Cell Lymphoma. Approve for 1 year if the patient meets ALL of the following (A, B, and C):

- A) Patient is ≥ 18 years of age; AND
- B) Patient meets ONE of the following (i, ii, iii, or iv):
 - i. Patient has CD30+ T-cell lymphoma; OR
Note: Examples include CD30+ angioimmunoblastic T-cell lymphoma, CD30+ peripheral T-cell lymphoma not otherwise specified, CD30+ primary cutaneous anaplastic large cell lymphoma, CD30+ lymphomatoid papulosis, CD30+ adult T-cell leukemia/lymphoma, CD30+ hepatosplenic T-cell lymphoma, CD30+ extranodal NK/T-cell lymphoma.
 - ii. Patient has anaplastic large cell lymphoma; OR
 - iii. Patient has breast implant-associated anaplastic large cell lymphoma; OR
 - iv. Patient has mycosis fungoides/Sezary syndrome; AND
- C) The medication is prescribed by or in consultation with an oncologist.

Dosing. Approve up to 1.8 mg/kg or a maximum of 180 mg administered by intravenous infusion no more frequently than once every 3 weeks.

CONDITIONS NOT RECOMMENDED FOR APPROVAL

Coverage of Adcetris is not recommended in the following situations:

1. Coverage is not recommended for circumstances not listed in the Recommended Authorization Criteria. Criteria will be updated as new published data are available.

HISTORY

Type of Revision	Summary of Changes	Review Date
Annual Revision	No criteria changes.	10/02/2024
Early Annual Revision	T-Cell Lymphoma: Removed CD30+ systemic anaplastic large cell lymphoma and CD30+ breast implant-associated anaplastic large cell lymphoma from the Note. Added patient has anaplastic large cell lymphoma and patient has breast implant-associated anaplastic large cell lymphoma as options for approval.	03/05/2025
Annual Revision	B-Cell Lymphoma: This condition of approval was moved from Other Uses with Supportive Evidence to the FDA Approved Indications Section. The Note of examples of B-Cell Lymphoma was revised to remove CD30+ from all of the B-cell lymphomas that are listed; histological transformation of indolent lymphomas to diffuse large B-cell lymphoma was added to the Note. The age requirement of ≥ 18 years of age was removed. The following requirement “Adcetris is used as second-line or subsequent therapy for CD30+ B-cell lymphoma” was reworded to “The patient has tried at least one prior therapy.” T-Cell Lymphoma: CD30+ mycosis fungoides/Sezary syndrome was removed from the Note of examples of CD30+ T-cell lymphoma. An option of approval was added if the patient has mycosis fungoides/Sezary syndrome.	03/18/2026
