

UTILIZATION MANAGEMENT MEDICAL POLICY

POLICY: Oncology (Injectable – Microtubule Inhibitor) – Jevtana Utilization Management Medical Policy

- Jevtana® (cabazitaxel intravenous infusion – Sanofi-Aventis)

REVIEW DATE: 03/04/2026

OVERVIEW

Jevtana, a microtubule inhibitor, is indicated in combination with prednisone for the treatment of **metastatic castration-resistant prostate cancer (CRPC)** in patients who were previously treated with a docetaxel-containing treatment regimen.¹

Guidelines

The National Comprehensive Cancer Network (NCCN) prostate cancer guidelines (version 5.2026 – January 23, 2026) recommend Jevtana, in combination with carboplatin and concurrent steroid for first-line metastatic CRPC in the setting of post-androgen receptor pathway inhibitors (ARPI) and pre-docetaxel (category 2A).^{2,3} It is a “Preferred” regimen post-ARPI and post-docetaxel (category 1). In addition, Jevtana in combination with carboplatin and a steroid (category 2A) is recommended for the treatment of small cell/neuroendocrine prostate cancer in fit patients with aggressive variant prostate cancer or in patients with unfavorable genomics defined as having defects in at least two of the following: phosphatase and tensin homolog (*PTEN*), tumor protein p53 (*TP53*), and retinoblastoma transcriptional corepressor 1 (*RBI*).

POLICY STATEMENT

Prior Authorization is recommended for medical benefit coverage of Jevtana. Approval is recommended for those who meet the **Criteria** and **Dosing** for the listed indication. Extended approvals are allowed if the patient continues to meet the criteria and dosing for the indication. Requests for doses outside of the established dosing documented in this policy will be considered on a case-by-case basis by a clinician (i.e., Medical Director or Pharmacist). All approvals are provided for the duration noted below. Because of the specialized skills required for evaluation and diagnosis of patients treated with Jevtana as well as the monitoring required for adverse events and long-term efficacy, approval requires Jevtana to be prescribed by or in consultation with a physician who specializes in the condition being treated.

Automation: None.

RECOMMENDED AUTHORIZATION CRITERIA

Coverage of Jevtana is recommended in those who meet the following criteria:

FDA-Approved Indication

1. **Prostate Cancer.** Approve for 1 year if the patient meets ALL of the following (A, B, C, and D):
 - A) Patient has metastatic castration-resistant prostate cancer; AND
 - B) The medication will be used in combination with a systemic corticosteroid (e.g., prednisone); AND
 - C) Patient meets ONE of the following criteria (i, ii, iii, or iv):
 - i. Patient has small cell/neuroendocrine prostate cancer and meets ONE of the following (a or b):
 - a) According to the prescriber, the patient is fit and has aggressive variant disease; OR
 - b) Patient has unfavorable genomics with defects in at least two of the following: phosphatase and tensin homolog (*PTEN*), tumor protein p53 (*TP53*), and retinoblastoma transcriptional corepressor 1 (*RBI*); OR
 - ii. Patient has been previously treated with a docetaxel-containing treatment regimen; OR
 - iii. Patient is not a candidate or is intolerant to docetaxel therapy, according to the prescriber; OR
 - iv. Patient has been treated with novel hormone therapy; AND
Note: Examples of novel hormone therapy include abiraterone, Erleada (apalutamide tablet), Nubeqa (darolutamide tablet), and Xtandi (enzalutamide tablet and capsule).
 - D) The medication is prescribed by or in consultation with an oncologist.

Dosing. Approve up to 25 mg/m² administered intravenously once every three weeks.

CONDITIONS NOT RECOMMENDED FOR APPROVAL

Coverage of Jevtana is not recommended in the following situations:

1. Coverage is not recommended for circumstances not listed in the Recommended Authorization Criteria. Criteria will be updated as new published data are available.
